

# Arkansas High Performance Computing Center

at the  
University of Arkansas

# AHPCC Workshop Series

## Introduction to Linux for HPC

# Why Linux?

- Compatible with many architectures
- OS of choice for large scale computing
- Free, high quality software tools and applications
- Open standards/accessibility to source code
- Development environment of choice for scientific research

## Operating system Family Performance Share

- Linux
- Unix

Click a row in the table below to drill down.

OPERATING SYSTEM FAMILY	COUNT	SYSTEM SHARE (%)	RMAX (GFLOPS)	RPEAK (GFLOPS)	CORES
Linux	494	98.8	419,253,297	640,067,791	29,226,383
Unix	6	1.2	1,868,442	2,215,095	76,128

<http://top500.org/statistics/list/>

# Linux for HPC

A few notes before beginning...

Linux is case sensitive! “A” and “a” are NOT the same thing.

It is best to avoid spaces in file naming. My Math Homework.txt should be My-Math-Homework.txt, or My\_Math\_Homework.txt.

Extensions in file names are ignored by Linux (but helpful to you...aka .txt, .sh, .dat, .pbs)

By default, Linux does not ask “Are You Sure” before performing operations. Be careful! (use -i if nervous)

No Trash Can or Waste Basket to retrieve accidentally deleted files from.

Control+C is your friend...interrupts a hung or persistent command.

“.” means “right here”, “..” means “back up one”

“~” is shortcut for “home directory”

TAB command completion

Arrow Up last command search

# Linux for HPC

- “ssh” - creates secure connection to remote system
- “pwd” - lists your current location on system
- “ls” - shows content of current directory
- “man” - get help and usage for a particular command
- “df” - shows disk space used
- “du” - shows disk usage in given directory
- “cd” - changes to a different directory
- “mkdir” - make new directory or folder
- “nano” - text editor
- “more” - allows viewing of text files without editor (“less” – includes scrolling)
- “mv” - moves or renames a file
- “cp” - copies a file to another name or location
- “wc” - counts characters, words, or lines in a file
- “head” - grab lines at top of text file
- “tail” - grab lines at bottom of text file
- “grep” - searches for specific words or strings
- “diff” - compares two files to show differences
- “rm” - deletes files and directories
- “wget” - command to transfer files via web protocol
- “scp” - transfer protocol for file transfer, related to ssh
- “history” - list of commands executed previously

# Linux for HPC

**ssh** - OpenSSH SSH client (remote login program)

```
uaf120305:~ eCycle$ ssh jpummil@trestles.uark.edu
jpummil@trestles.uark.edu's password:
Last login: Mon Dec 7 09:34:21 2015 from zenlb4
[jpummil@tres-l2 ~]$
```

# Linux for HPC

**pwd** – print name of current/working directory (folder)

```
[jpummil@tres-l2 ~]$ pwd  
/home/jpummil
```

# Linux for HPC

**ls** – list directory (folder) contents

```
[jpummil@tres-l2 ~]$ ls  
Apps intel perl5 test
```

```
[jpummil@tres-l2 ~]$ ls -lh  
total 16K  
drwxrwxr-x 21 jpummil jpummil 4.0K Nov  7 16:28 Apps  
drwxr-xr-x  3 jpummil jpummil 4.0K Nov  7 16:31 intel  
drwxrwxr-x  5 jpummil jpummil 4.0K Nov  6 11:21 perl5  
drwxrwxr-x  2 jpummil jpummil 4.0K Dec  8 10:28 test
```

# Linux for HPC

**man** – format and display the online manual pages

```
[jpummil@tres-l2 ~]$ man ls
```

## NAME

ls - list directory contents

## SYNOPSIS

ls [OPTION]... [FILE]...

## DESCRIPTION

List information about the FILES (the current directory by default). Sort entries alphabetically if none of **-cftuvSUX** nor **--sort**.

Mandatory arguments to long options are mandatory for short options too.

**-a, --all**

do not ignore entries starting with .

# Linux for HPC

**df** – report file system disk space usage

```
[jpummil@tres-l2 ~]$ df -h
Filesystem      Size  Used Avail Use% Mounted on
/dev/sda3       901G  3.2G  852G   1% /
tmpfs           16G   8.0K   16G   1% /dev/shm
/dev/sda1       248M   43M  193M  19% /boot
172.17.6.15@o2ib:/storageet
                 70T  12M   70T   1% /storage2
172.17.6.15@o2ib:/scratch2
                 16T  1.7T  14T  11% /scratch
172.17.6.19@o2ib:/storageep
                 70T 113G   70T   1% /storage
172.17.6.19@o2ib:/storaged
                 70T  12M   70T   1% /storaged
```

# Linux for HPC

**du** – estimate file space usage

```
[jpummil@tres-l2 ~]$ du -sh  
2.4G .  
[jpummil@tres-l2 ~]$ du -sh work  
2.5M perl5
```

# Linux for HPC

**rm** – remove files or directories

```
[jpummil@tres-l2 ~]$ ls  
Apps files file.txt intel perl5 phone.txt work
```

```
[jpummil@tres-l2 ~]$ touch file.txt
```

```
[jpummil@tres-l2 ~]$ ls  
Apps files file.txt intel perl5 phone.txt work
```

```
[jpummil@tres-l2 ~]$ rm file.txt
```

```
[jpummil@tres-l2 ~]$ ls  
Apps files intel perl5 phone.txt work
```

(need `rm -R` to delete directories with files in them)

# Linux for HPC

**mkdir/rmdir (rm -R)** – make/remove directories (folders)

```
[jpummil@tres-l2 ~]$ ls  
Apps intel perl5
```

```
[jpummil@tres-l2 ~]$ mkdir test
```

```
[jpummil@tres-l2 ~]$ ls  
Apps intel perl5 test
```

```
[jpummil@tres-l2 ~]$ rmdir test
```

```
[jpummil@tres-l2 ~]$ ls  
Apps intel perl5
```

```
[jpummil@tres-l2 ~]$ mkdir work
```

# Linux for HPC

**cd** – change to a different directory (folder)

```
[jpummil@tres-l2 ~]$ pwd  
/home/jpummil
```

```
[jpummil@tres-l2 ~]$ ls  
Apps intel perl5 work
```

```
[jpummil@tres-l2 ~]$ cd work
```

```
[jpummil@tres-l2 perl5]$ pwd  
/home/jpummil/work
```

```
[jpummil@tres-l2 perl5]$ ls
```

```
[jpummil@tres-l2 perl5]$ cd ..
```

```
[jpummil@tres-l2 ~]$ pwd  
/home/jpummil
```

# Linux for HPC

**more** – file perusal filter for crt viewing

```
[jpummil@tres-l2 ~]$ more file.txt
```

```
apple  
banana  
orange  
lemon  
lime
```

# Linux for HPC

**mv** – move (rename) files

```
[jpummil@tres-l2 ~]$ ls  
Apps file.txt intel perl5
```

```
[jpummil@tres-l2 ~]$ mv file.txt fruit.txt
```

```
[jpummil@tres-l2 ~]$ ls  
Apps fruit.txt intel perl5
```

```
[jpummil@tres-l2 ~]$ more fruit.txt  
apple  
banana  
orange  
lemon  
lime
```

# Linux for HPC

**cp** – copy files and directories

```
[jpummil@tres-l2 ~]$ ls  
Apps fruit.txt intel perl5
```

```
[jpummil@tres-l2 ~]$ cp fruit.txt old-fruit.txt
```

```
[jpummil@tres-l2 ~]$ ls -l  
total 13  
drwxrwxr-x 21 jpummil jpummil 4096 Nov  7 16:28 Apps  
-rw-rw-r--  1 jpummil jpummil  31 Dec  8 12:38 fruit.txt  
drwxr-xr-x  3 jpummil jpummil 4096 Nov  7 16:31 intel  
-rw-rw-r--  1 jpummil jpummil  31 Dec  8 12:52 old-fruit.txt  
drwxrwxr-x  5 jpummil jpummil 4096 Nov  6 11:21 perl5
```

```
[jpummil@tres-l2 ~]$ more old-fruit.txt  
apple  
banana  
orange  
lemon  
lime
```

# Linux for HPC

**wc** – print newline, word, and byte counts for each file

```
[jpummil@tres-l2 ~]$ wc fruit.txt  
5 5 31 fruit.txt
```

```
[jpummil@tres-l2 ~]$ wc old-fruit.txt  
5 5 31 old-fruit.txt
```

# Linux for HPC

**head** – output the first part of files

```
[jpummil@tres-l2 ~]$ more fruit.txt
```

```
apple  
banana  
orange  
lemon  
Lime
```

```
[jpummil@tres-l2 ~]$ head -n 2 fruit.txt
```

```
apple  
banana
```

# Linux for HPC

**tail** – output the last part of files

```
[jpummil@tres-l2 ~]$ more fruit.txt
```

```
apple  
banana  
orange  
lemon  
Lime
```

```
[jpummil@tres-l2 ~]$ tail -n 2 fruit.txt
```

```
lemon  
Lime
```

# Linux for HPC

**grep** – print lines matching a pattern

```
[jpummil@tres-l2 ~]$ ls  
Apps fruit.txt intel old-fruit.txt perl5 phone.txt
```

```
[jpummil@tres-l2 ~]$ more phone.txt  
123-456-7890  
987-654-3210  
654-098-4321
```

```
[jpummil@tres-l2 ~]$ grep 123 phone.txt  
123-456-7890
```

(grep -i, ignore case    grep -v print all but matching)

# Linux for HPC

**sort** – sort lines of files

```
[jpummil@tres-l2 ~]$ more phone.txt  
123-456-7890  
987-654-3210  
654-098-4321
```

```
[jpummil@tres-l2 ~]$ sort phone.txt  
123-456-7890  
654-098-4321  
987-654-3210
```

```
[jpummil@tres-l2 ~]$ sort -r phone.txt  
987-654-3210  
654-098-4321  
123-456-7890
```

# Linux for HPC

**diff** – compare files line by line

```
[jpummil@tres-l2 ~]$ more fruit.txt  
apple  
banana  
orange  
Lemon  
lime
```

```
[jpummil@tres-l2 ~]$ more fruit2.txt  
apple  
banana  
orange  
cherry  
lime
```

```
[jpummil@tres-l2 ~]$ diff fruit.txt fruit2.txt  
4c4  
< lemon  
---  
> cherry
```

# Linux for HPC

**history** – list of previously executed commands

```
[jpummil@tres-l2 ~]$ history | tail -n 18
1110 wget http://home.iae.nl/users/mhx/flops.c
1111 ls
1112 which gcc
1113 gcc -o flops flops.c
1114 more flops.c
1115 gcc -DUNIX -o flops flops.c
1116 ls
1117 ./flops
1118 ls
1119 rm flops
1120 clear
1121 ls
1122 scp flops.c jpummil@comp.uark.edu:
1123 scp jpummil@comp.uark.edu:flops.c .
1124 scp jpummil@comp.uark.edu:flops.c jpummil@sublime.uark.edu:
1125 man history
1126 clear
1127 history | tail -n 20
```

# Linux for HPC

## Merging files

> and >> operators for re-directing output to create new files

> Will create new file, but subsequent use will overwrite existing data

```
[jpummil@tres-l2 ~]$ more phone.txt > merged.txt
```

```
[jpummil@tres-l2 ~]$ more merged.txt
```

```
123-456-7890
```

```
987-654-3210
```

```
654-098-4321
```

```
[jpummil@tres-l2 ~]$ more fruit.txt > merged.txt
```

```
[jpummil@tres-l2 ~]$ more merged.txt
```

```
apple
```

```
banana
```

```
orange
```

```
lemon
```

```
lime
```

# Linux for HPC

## Merging files

> and >> operators for re-directing output to create new files

>> Will also create new file, but will instead append new data to existing data

```
[jpummil@tres-l2 ~]$ more phone.txt >> merged.txt
```

```
[jpummil@tres-l2 ~]$ more merged.txt
```

123-456-7890

987-654-3210

654-098-4321

```
[jpummil@tres-l2 ~]$ more fruit.txt >> merged.txt
```

```
[jpummil@tres-l2 ~]$ more merged.txt
```

123-456-7890

987-654-3210

654-098-4321

apple

banana

orange

lemon

lime

# Linux for HPC

## “Piping” commands

| is called the “pipe” in Linux (above the \ on the far right side of keyboard)

| allows you to join commands together in a string to do multiple operations

```
[jpummil@tres-l2 ~]$ grep -i 123 phone.txt > temp.txt
```

```
[jpummil@tres-l2 ~]$ wc -c temp.txt  
13 temp.txt
```

\*\*\*Could be written as one command using the pipe (|)....

```
[jpummil@tres-l2 ~]$ grep -i 123 phone.txt | wc -c  
13
```

# Linux for HPC

## Using “wildcards”

\* Is considered a matching character or “wildcard” in linux

```
[jpummil@tres-l2 ~]$ ls  
Apps extra.txt flops.c fruit2.txt fruit.txt intel perl5 phone.txt temp2.txt temp.txt
```

```
[jpummil@tres-l2 ~]$ ls *.txt  
extra.txt fruit2.txt fruit.txt phone.txt temp2.txt temp.txt
```

```
[jpummil@tres-l2 ~]$ ls fr*.txt  
fruit2.txt fruit.txt
```

```
[jpummil@tres-l2 ~]$ rm te*.txt
```

```
[jpummil@tres-l2 ~]$ ls *.txt  
extra.txt fruit2.txt fruit.txt phone.txt
```

(Reference also both “?” and “[ ]” wildcards for even more flexibility)

# Linux for HPC

**wget** – The non-interactive network downloader

```
[jpummil@tres-l2 ~]$ ls
```

```
Apps fruit2.txt fruit.txt intel perl5 phone.txt
```

```
[jpummil@tres-l2 ~]$ wget http://home.iae.nl/users/mhx/flops.c
```

```
--2015-12-08 13:28:28-- http://home.iae.nl/users/mhx/flops.c
```

```
Resolving home.iae.nl... 212.61.15.15
```

```
Connecting to home.iae.nl|212.61.15.15|:80... connected.
```

```
HTTP request sent, awaiting response... 200 OK
```

```
Length: 34942 (34K) [text/x-c]
```

```
Saving to: "flops.c"
```

```
100%[=====>] 34,942 127K/s in 0.3s
```

```
2015-12-08 13:28:29 (127 KB/s) - "flops.c" saved [34942/34942]
```

```
[jpummil@tres-l2 ~]$ ls
```

```
Apps flops.c fruit2.txt fruit.txt intel perl5 phone.txt
```

# Linux for HPC

**scp** – secure copy (remote file copy program)

*From trestles.uark.edu (local) to comp.uark.edu (remote):*

```
[jpummil@tres-l2 ~]$ scp flops.c jpummil@comp.uark.edu:
```

```
Password:
```

```
flops.c 100% 34KB 34.1KB/s 00:00
```

*From comp.uark.edu (remote) to trestles.uark.edu (local):*

```
[jpummil@tres-l2 ~]$ scp jpummil@comp.uark.edu:flops.c .
```

```
Password:
```

```
flops.c 100% 34KB 34.1KB/s 00:00
```

(Remember....SOURCE, then DESTINATION)

# Linux for HPC

## Compressing and archiving files

Lots of files become tedious to maintain over time and they also take up lots of space on the system. For these reasons and others, it is nice to be able to organize and simplify things on occasion.

Look at man pages to view the commands “tar” and “gzip”

Files “bundled together” into one package will have a .tar suffix.

If they have also been compressed with gzip, they will be .tar.gz or .tgz

```
[jpummil@tres-l1 test]$ ls  
flops2.c flops3.c flops4.c flops5.c flops.c
```

# Linux for HPC

## Compressing and archiving files

```
[jpummil@tres-l1 test]$ tar cf flops.tar flops*.c
```

```
[jpummil@tres-l1 test]$ ls -lh
```

```
total 3.0K
```

```
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:07 flops2.c  
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:08 flops3.c  
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:08 flops4.c  
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:08 flops5.c  
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:07 flops.c  
-rw-rw-r-- 1 jpummil jpummil 180K Dec 9 13:10 flops.tar
```

```
[jpummil@tres-l1 test]$ gzip flops.tar
```

```
[jpummil@tres-l1 test]$ ls -lh
```

```
total 3.0K
```

```
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:07 flops2.c  
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:08 flops3.c  
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:08 flops4.c  
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:08 flops5.c  
-rw-rw-r-- 1 jpummil jpummil 35K Dec 9 13:07 flops.c  
-rw-rw-r-- 1 jpummil jpummil 37K Dec 9 13:10 flops.tar.gz
```

# Linux for HPC

## Compressing and archiving files

So now...we have BOTH the originals as well as the compressed archive. What now?

```
[jpummil@tres-l1 test]$ tar tvf flops.tar.gz
-rw-rw-r-- jpummil/jpummil 34942 2015-12-09 13:07 flops2.c
-rw-rw-r-- jpummil/jpummil 34942 2015-12-09 13:08 flops3.c
-rw-rw-r-- jpummil/jpummil 34942 2015-12-09 13:08 flops4.c
-rw-rw-r-- jpummil/jpummil 34942 2015-12-09 13:08 flops5.c
-rw-rw-r-- jpummil/jpummil 34942 2015-12-09 13:07 flops.c
```

```
[jpummil@tres-l1 test]$ rm flops*.c
```

```
[jpummil@tres-l1 test]$ ls -lh
total 512
-rw-rw-r-- 1 jpummil jpummil 37K Dec  9 13:21 flops.tar.gz
```

One neat, tidy bundle...and about 20% of the original disk usage!

To restore when needed, simply "`tar xvzf flops.tar.gz`" ....

# Linux for HPC

## Final Exercises

- Use Nano to generate a few unique text files and save them
- Practice copying and renaming the files
- Practice merging the files, grepping for unique information, sorting them in different ways.
- Practice archiving and compressing the files.
- Practice remote copying the files to and from comp.uark.edu

PRACTICE! PRACTICE! PRACTICE!
